Printed in the United States of America
Format of this book
This book contains sets of Biology Regents exam practice questions organized into days. There are a total of 30 days of question sets. Question sets are grouped into three major categories that are listed below.

Multiple Choices: Questions for Part A and B-1 practice.
There are eight days of question sets in this category. Practice questions in this category test your ability to answer straightforward multiple choice questions.

Multiple Choices: Questions with Graphs, Tables and Diagrams.
There are eight days of question sets in this category. Practice questions in this category are also for Part A and B-1 Regents exam practice. However, the multiple choice questions in this category test your ability to recognize, interpret, and compare information in graphs, tables and diagrams.

Short Answers: Questions for Part B-2, C and D practice.
There are eight days of question sets in this category. Practice questions in this category vary from reading paragraphs to drawing and graphing.

Along with two sets of mixed practice questions and the two Regents practice exams, there are more than seven Regents exams worth of multiple choice questions available for practice in this book. And there are almost five exams worth of short answer type questions available for practice in this book.

The small number of questions in each set allows for the benefits to you:
1. To quickly do a few questions, correct them, and see the result and your performance right away. You do not have to wait to complete one whole exam as with other books.

2. To make you feel less overwhelm in preparing for your regents exam so you can study and practice more often.
**Answers and Explanations**

Answers are given to all questions in this book. Answer explanations are given to all questions (except for the practice exams). Unlike many other books, this book *does not just explain why* the answer given to a question is the correct one. Instead, with the cleanest, clearest, most simplified, and easiest-to-follow steps ever seen, this book *shows you how to pick out key information* from a question and *how to think through the question* to arrive at the correct answer given. This method of explanations offers you a more quality review and understanding of the biology concept tested, and a better opportunity to answer similar questions correctly. It is highly recommended that you read up and study the steps given in the explanations to questions that you did not get correct.

**Keeping Track of Points and Progress**

At the end of each question set, you are provided with a space to note the number of correct points after grading. This is a very important, often overlooked, element in preparing for a test like this. By making a note of your points after each set:

1. You’ll be able to easily see and keep track of your progress and improvement from one multiple choice (or short answer) set to the next.
2. You’ll be able to easily see and track which category of questions you are doing great on, and which category you are struggling with.
3. You’ll be to see if what you are doing is getting you better prepared for the exam as the exam date draws near.

It is almost pointless to study day-after-day without knowing whether your studying and effort are getting you better prepared for the test. This book allows you to quickly and easily keep track of your points, which allows you to see progress, improvement, and readiness for your Biology Regents Exam.
Preparing for your Biology Regents Exam

Months, weeks, and days before the Exam

Pay attention and listen to your teacher.
Your teacher knows you better than authors of exams prep books.
Pay attention in class, do what she or he says and recommends.

Attend Review Sessions.
Bring specific questions on concepts that you need the most help with.
You’ll get more out of a review session if your questions to specific problems are answered.

Practice Exam Quality Questions: Use This Book.
Start early (a month or so) and practice a set of questions a day at a time.
Correct your answers and read up on explanations.
Keep note of points of each set to track your progress and improvement.

Study notes and review packages
Focus your studying on concepts you have problems with because you may not have enough time to study everything.
Make notes of concepts that are not clear, and bring them to your teacher.
Alternate between studying and practicing questions. It is highly recommended that you spend a little more time practicing questions and a little less time reading books and studying review packages.

Familiarize yourself with the current exam and scoring formats
The two full Practice Exams on Day 27 – 30 in this book are based on the most current Biology Regents exam format. The grading formats for all multiple choice questions and short answer questions are all based on the most current formats. Being aware of these formats is a very important element in preparing for Biology Regents Exam.

Night before the exam
Get a good night sleep, Relax!

Day of the exam
Eat a good meal. Relax!
Bring pencils, pens, and a calculator.

During the exam
Relax! Read and think through each question and choice thoroughly, and take your time. You know the answer to that question because you’ve worked hard and you’ve been taught well. And most of all,

You got Bio 😊

Good Luck!

Easy does it

. Practice a set of questions one day at a time. You’ll feel less overwhelmed.

Quality over Quantity

. Complete a set, correct a set, read up on explanations, and compare your performance to previous set of the same category. You’ll see your progress.
Day 1: 10 Multiple Choice Questions
10 points Part A and B1 practice

Start: Answer all questions on this day before stopping.

1. Two closely related species of birds live in the same tree. Species A feeds on ants and termites, while species B feeds on caterpillars. The two species coexist successfully because
   (1) each occupies a different niche
   (2) they interbreed
   (3) they use different methods of reproduction
   (4) birds compete for food

2. A human liver cell is very different in structure and function from a nerve cell in the same person. This is best explained by the fact that
   (1) different genes function in each type of cell
   (2) liver cells can reproduce while the nerve cells cannot
   (3) liver cells contain fewer chromosomes than nerve cells
   (4) different DNA is present in each type of cell

3. The levels of organization for structure and function in the human body from least complex to most complex are
   (1) systems —— > organs —— > tissues —— > cells
   (2) cells —— > organs —— > tissues —— > systems
   (3) tissues —— > systems —— > cells —— > organs
   (4) cells —— > tissues —— > organs —— > systems

4. After a rabbit population reaches the carrying capacity of its habitat, the population of rabbits will most likely
   (1) decrease, only
   (2) increase, only
   (3) alternately increase and decrease
   (4) remain unchanged

5. Much of the carbon dioxide produced by green plants is not excreted as a metabolic waste because it
   (1) can be used for photosynthesis
   (2) is too large to pass through cell membranes
   (3) is needed for cellular respiration
   (4) can be used for the synthesis of proteins
6. Which part of a molecule provides energy for life processes?
   (1) carbon atoms  (3) chemical bonds
   (2) oxygen atoms  (4) inorganic nitrogen

7. To increase chances for a successful organ transplant, the person receiving the organ should be given special medications. The purpose of these medications is to
   (1) increase the immune response in the person receiving the transplant
   (2) decrease the immune response in the person receiving the transplant
   (3) decrease mutations in the person receiving the transplant
   (4) increase mutations in the person receiving the transplant

8. Competition between two species occurs when
   (1) mold grows on a tree that has fallen in the forest
   (2) chipmunks and squirrels eat sunflower seeds in a garden
   (3) a crow feeds on the remains of a rabbit killed on the road
   (4) a lion stalks, kills, and eats an antelope

9. In order to reduce consumption of nonrenewable resources, humans could
   (1) burn coal to heat houses instead of using oil
   (2) heat household water with solar radiation
   (3) increase industrialization
   (4) use a natural-gas grill to barbecue instead of using charcoal

10. Four environmental factors are listed below.
    A. energy
    B. water
    C. oxygen
    D. minerals

    Which factors limit environmental carrying capacity in a land ecosystem?
    (1) A, only  (3) A, C, and D, only
    (2) B, C, and D, only  (4) A, B, C, and D

Stop. Correct your answers and note how many correct Points
1. 1 Note: Since each of the two Species feeds on different insect on the same habitat (tree), each is performing a different function or role within that habitat.

Recall: The word *niche* in Choice 1 best described the different functions played by the two species in the same habitat.

2. 1 Note: The word *gene* in Choice 1 best describes why the two cells have different functions and structures.

Recall: Gene is a unit of heredity that holds instructions and information (genetic codes) for building and maintaining cells to perform certain function. One cell is different from the others because it contains different genetic code.

3. 4 Note: Choice 1 and 3 should be eliminated right away because the correct choice should start with cells, the basic and least complex unit of life.

Choice 4 is correct because **Cells** are the building materials for **Tissues**, and tissues formed **Organs**, and a group of organs make up a **System** that performs certain life function. (C-TOS)

4. 3 Recall: Population growth of the rabbit in its habitat goes through a periodic increase (due to birth) and decrease (due to death) as means maintaining population homeostasis.

Note: **Population homeostasis** is necessary for the survival of the rabbit (or any) species.

5. 1 Note: The key words in this question are "**carbon dioxide**" and "**green plants**"

Recall: **Carbon dioxide**, CO₂, is a key reactant in photosynthesis process that is carried out by green plants.

\[
\text{CO}_2 + \text{H}_2\text{O} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + \text{O}_2 + \text{energy}
\]

*photosynthesis*
### Day 1: Answers and Explanations

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>6. 3</td>
<td><strong>Recall:</strong> Chemical bonds hold atoms of molecules together. Potential energy is stored in <strong>chemical bonds</strong> of molecules. Energy is released for life process when these bonds are broken and formed.</td>
</tr>
</tbody>
</table>
| 7. 2 | **Recall:** A transplant involve introducing a foreign organ into the organ recipient.  
**Recall:** The recipient body is likely to reject this foreign organ by a mean of immune response to attack the foreign organ.  
**Therefore:** Special medications given to the organ recipient serve to decrease the immune response (or lessen chance of rejection) and increase a chance of successful transplant.  
**Note:** Choice 1 is incorrect because that will increase immune response means increase chance of rejection. Choice 3 and 4 are incorrect because mutations have nothing to do with organ transplants. |
| 8. 2 | **Note:** The key word in this question is “competition.”  
**Recall:** Competition occurs when different species in the same habitat attempt to use the same resources for survival.  
**Note:** Only Choice 2 indicates different species (chipmunks and squirrels) using the same resource (sunflower seeds) in the same habitat (garden). |
| 9. 2 | **Note:** One way of “reducing consumption of nonrenewable resources” is to use renewable resources for the same purpose.  
**Recall:** Solar (sun) energy is a renewable resource than can be used as a heat source in place of burning up nonrenewable resources such as oil, coal and natural gases. |
| 10. 4 | **Note:** All four factors are necessary for survival of species, and all four can be used up if the population of species gets too large in the land ecosystem.  
**Therefore:** Carrying capacity of the land ecosystem depends on all four. |
Start: Answer all questions on this day before stopping.

1. In the diagram below, what does X most likely represent?

![Diagram of ecological cycle](image)

- (1) autotrophs
- (2) herbivores
- (3) decomposers
- (4) carnivores

2. The illustration below shows an insect resting on some green leaves. The size, shape, and green color of this insect are adaptations that would most likely help the insect to

![Illustration of insect](image)

- (1) compete successfully with all birds
- (2) make its own food
- (3) hide from predators
- (4) avoid toxic waste materials

3. Which cell structure contains information needed for protein synthesis?

![Cell structure diagram](image)

- (1)
- (2)
- (3)
- (4)
4. The diagram below represents a biochemical process. Which molecule is represented by X?

![Biochemical Process Diagram]

(1) DNA  (2) starch  (3) protein  (4) ATP

5. Which statement best explains the change shown in the diagram below?

![Change Diagram]

(1) Gene expression in an organism can be modified by interactions with the environment.
(2) Certain rabbits produce mutations that affect genes in specific areas of the body.
(3) Sorting and recombination of genes can be influenced by very cold temperatures.
(4) Molecular arrangement in existing proteins can be altered by environmental factors.

6. Which graph represents a population that grew and is maintained at the carrying capacity of its ecosystem?

![Population Growth Graphs]

(1) [Graph 1]  (2) [Graph 2]  (3) [Graph 3]  (4) [Graph 4]
7. The diagram below represents a common laboratory technique in molecular genetics.

![Diagram of DNA replication]

One common use of this technology is the

(1) production of a human embryo to aid women who are unable to have children
(2) change of single-celled organisms to multicellular organisms
(3) introduction of a toxic substance to kill bacterial cells
(4) production of hormones or enzymes to replace missing human body chemicals

**Base your answers to questions 9 and 10 on the diagram below, which represents stages in the digestion of a starch, and on your knowledge of biology.**

![Diagram of starch digestion]

8. The products would most likely contain

(1) simple sugars          (3) amino acids
(2) fats                   (4) minerals

9. The structure labeled X most likely represents

(1) an antibody          (3) an enzyme
(2) a receptor molecule (4) a hormone
10. The arrows in the diagram below illustrate processes in the life of a species that reproduces sexually.

Which processes result directly in the formation of cells with half the amount of genetic material that is characteristic of the species?

(1) 1 and 2  
(2) 2 and 3  
(3) 3 and 4  
(4) 4 and 5
1. **3 Note:** In the food chain diagram shown, X derive their energy from producers (green plants) and consumers (animals).

**Recall:** Of all the organisms listed, ONLY decomposers (X) derive their energy from decay of plants and animal tissues.

**Note:** When decomposers died, they leave behind minerals in the soil that are used by producers to start the food chain cycle all over again.

2. **3 Note:** In the diagram shown, the insect is blended in (camouflaged) with the patterns on the leave.

**Recall:** By adapting features such as shape, size, and colors that allows for blending in with its environment, the insect can hide, and remain unnoticed from predators. (choice 3)

**Note:** These adaptation features are not necessary for any of the other three behaviors of the insect listed in choices 1, 2 and 4.

3. **2 Recall:** Protein synthesis is carried out in the ribosomes of a cell.

**Note:** In the plant cell diagram, ribosome is labeled with Choice 2

**Note:** Choice 1 is the nucleolus (contains chromosome, genetic info)

Choice 3 is the vacuole (stores materials such as water and starch)

Choice 4 is the cell wall (protects the cell)

4. **4 Note:** The key information in the diagram is “cellular respiration”

**Recall:** In cellular respiration, glucose and oxygen are converted to water and carbon dioxide (waste products), and energy in the form of ATP (X)

\[ C_{6}H_{12}O_{6} + O_{2} \rightarrow CO_{2} + H_{2}O + ATP \]

**cellular respiration** waste products **X**

5. **1 Note:** The obvious thing about this diagram is the color change of the rabbit’s fur from white to black where the ice packed was placed.

**Recall:** Characteristics (such as eye color, skin color, fur color..) of an individual are all results of gene expression. Environmental factor such as temperature change (ice pack) can alter gene expression of an individual, hence, change in characteristics (white to black fur) of the individual.
6. 4 Note: The key information in this question is that population “grew and is maintained”

Note: Only Choice 4 graph shows a rapid population increase (growth) but levels off (maintained) at a certain population size (carrying capacity).

7. 4 Note: The process depicted in the diagram is known as “Recombinant DNA”

Recall: In Recombinant DNA process, a portion of a DNA is moved from the donor cell (Human) to the recipient cell (bacteria).

This process will allow the bacteria cell to rapidly produce chemicals (hormones or enzymes) that DNA section coded for.

8. 1 Note: In the diagram, the products are smaller units of the starch

Recall: Starches are complex carbohydrate, which are composed of smaller and simpler molecules of sugar.

9. 3 Note: In the diagram, substance X is unchanged during the chemical breakdown of the starch.

Recall: Substances that are unchanged during biological (or chemical) processes are called enzymes or catalyst.

Therefore: X is an enzyme because it is unchanged

10. 1 Recall: Egg (1) and sperm (2) cells each contains half the genetic materials of an individual as a result of meiosis.
Day 3: Short Answer Questions  
10 points  Part B2, C and D Practice

Start: Answer all questions on this day before stopping

1. Acetylcholine is a chemical secreted at the ends of nerve cells. This chemical helps to send nerve signals across synapses (spaces between nerve cells). After the signal passes across a synapse, an enzyme breaks down the acetylcholine. LSD is a drug that blocks the action of this enzyme. Describe one possible effect of LSD on the action of acetylcholine. [1]  

2. Mice store only a small amount of the energy they obtain from plants they eat. State what might happen to some of the remaining energy they obtain from the plants. [1]

3. State one reason that most foods must be digested before they can enter a cell. [1]

4. Cell A shown below is a typical red onion cell in water on a slide viewed with a compound light microscope.

![Cell A](image)

Draw a diagram of how cell A would most likely look after salt water has been added to the slide and label the cell membrane in your diagram. [2]
Base your answers to questions 5 and 6 on the information and data table below and on your knowledge of biology.

A student cut three identical slices from a potato. She determined the mass of each slice. She then placed them in labeled beakers and added a different solution to each beaker. After 30 minutes, she removed each potato slice from its solution, removed the excess liquid with a paper towel, and determined the mass of each slice. The change in mass was calculated and the results are shown in the data table below.

<table>
<thead>
<tr>
<th>Beaker</th>
<th>Solution</th>
<th>Change in Mass</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>distilled water</td>
<td>gained 4.0 grams</td>
</tr>
<tr>
<td>2</td>
<td>6% salt solution</td>
<td>lost 0.4 gram</td>
</tr>
<tr>
<td>3</td>
<td>16% salt solution</td>
<td>lost 4.7 grams</td>
</tr>
</tbody>
</table>

5. Identify the process that is responsible for the change in mass of each of the three slices. [1]

____________________________________________________________

6. Explain why the potato slice in beaker 1 increased in mass. [1]

____________________________________________________________

____________________________________________________________
Base your answers to questions 8 through 10 on the diagram below and on your knowledge of biology. The diagram shows the results of a technique used to analyze DNA.

7. This technique used to analyze DNA directly results in
   (1) synthesizing large fragments of DNA
   (2) separating DNA fragments on the basis of size
   (3) producing genetically engineered DNA molecules
   (4) removing the larger DNA fragments from the samples

8. This laboratory technique is known as
   (1) gel electrophoresis
   (2) DNA replication
   (3) protein synthesis
   (4) genetic recombination

9. State one specific way the results of this laboratory technique could be used. [1]

   ________________________________

   ________________________________
1. 1 point

Note: According to the paragraph:
Acetylcholine helps to carry nerve signals.
Special enzyme are present to destroy acetylcholine
LSD blocks action of enzyme that destroys acetylcholine.

Question: What is the indirect effect of LSD on action of acetylcholine

Acceptable responses include BUT not limited to:
The work of acetylcholine would occur continuously.
Nerve signals would not be turned of.
Cell communication would be disrupted.

2. 1 point

Recall: Energy is needed for many life function of living organism

Acceptable responses include BUT not limited to:
Much of the energy is lost as heat (during cellular respiration).
Some of the energy is used by the mice for life functions.

3. 1 point

Recall: Nutrients in food are made up of large molecules.

Digestion breaks down these large molecules into smaller ones.

Acceptable responses include BUT not limited to:
Certain food molecules are too large to pass through the cell membrane.
Only small molecules can pass through cell membranes.
4. **2 point**

**Recall:** A cell placed in hypertonic solution (salt water) will lose water through osmosis. This lost of water causes the internal compartment (cytoplasm) to shrink and pull away from the cell wall.

**Since your diagram will vary from example shown below, Acceptable drawing must show:**

. The cytoplasm of the cell should be plasmolyzed (smaller, rounded) with the cell membrane away from the cell wall. (1 point)

. The cell membrane should be clearly baled. (1 point)

![Cell membrane](image)

5. **1 point**

**Note:** Based on the data given, the change in mass is due to movement of water either into a potato slice (Beaker 1) or out of a potato slice (Beaker 2 and 3).

**Acceptable response will be any process that describes movement of water from one area to another.**

*Osmosis*

*Diffusion*

*Passive transport*

6. **1 point**

**Note:** There is a higher concentration of water in Beaker 1 (distilled water) than inside a potato slice

**Acceptable responses include, but are not limited to:**

*Water diffused into the cells of the potato because there was a higher concentration of water outside than inside the slice.*

*The potato slice increased in water content.*
7. 1 point 3

Note: The diagram shown is from a result of gel electrophoresis.

Note: The size difference between the blots on top to those at the bottom of the DNA sample diagram

8. 1 point 1

Recall: During gel electrophoresis process, samples containing a mixture of polarized DNA fragments are separated (by using electrical current) according to their size.

Electric field is then used to pull the polarized fragment through the gel. Smaller size DNA move faster and appears as blot at the bottom. Larger size DNA move more slowly, and appears as a blot closer to the top.

9. 1 point

Note: The purpose of gel electrophoresis is to separate DNA fragments by size, and then compare the blot patterns to that of a known source.

Question is: For what purpose would one compare DNA patterns?

Acceptable responses include, but are not limited to:

Determining evolutionary relationships
Gene testing for diagnosis
Paternity testing
Determining identity
Solving crimes
1. The diagram below represents three human body systems.

Which row in the chart below correctly shows what systems A, B, and C provide for the human body?

<table>
<thead>
<tr>
<th>Row</th>
<th>System A</th>
<th>System B</th>
<th>System C</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1)</td>
<td>blood cells</td>
<td>glucose</td>
<td>hormones</td>
</tr>
<tr>
<td>(2)</td>
<td>oxygen</td>
<td>absorption</td>
<td>gametes</td>
</tr>
<tr>
<td>(3)</td>
<td>gas exchange</td>
<td>nutrients</td>
<td>waste removal</td>
</tr>
<tr>
<td>(4)</td>
<td>immunity</td>
<td>coordination</td>
<td>carbon dioxide</td>
</tr>
</tbody>
</table>

2. Which statement provides accurate information about the technique illustrated below?

- (1) This technique results in offspring that are genetically identical to the parents.
- (2) New varieties of organisms can be developed by this technique known as selective breeding.
- (3) This technique is used by farmers to eliminate mutations in future members of the species.
- (4) Since the development of cloning, this technique is no longer used in agriculture.
15. Which statement best describes the flow of energy and the movement of chemical compounds in an ecosystem?

(1) Energy flows into living organisms and remains there, while chemical compounds are transferred from organism to organism.
(2) Chemical compounds flow in one direction in a food chain and energy is produced.
(3) Energy is transferred from organism to organism in a food chain and chemical compounds are recycled.
(4) Energy flows out of living organisms and is lost, while chemical compounds remain permanently inside organisms.

Stop. Correct your answers and note how many correct Points.

Day 22: continue.

Tracking your progress

If you have completed Day 13, 16, 19 and 22 multiple choice question sets you can easily check your progress and improvements in this question category.

- Go to page 273
- Plot and graph the number of points you got correct on each of the days using the second graph on the page (the 15 points graph)

You hope to see an upward trend on the graph, which indicates improvement and progress.

If you are not satisfied with what your performance and progress, we recommend that you study a bit from your review packets or books before continuing to the next sets of questions in this book.
1 The greatest number of relationships between the organisms in an ecosystem is best shown in
(1) a food chain
(2) an energy pyramid
(3) a food web
(4) an ecological succession diagram

2 The diagram below shows stages of human reproduction.

The direct result of fertilization is represented at
(1) A                (3) C
(2) B                (4) D
Part B–2: Answer all questions in this part. [12 points]

Directions (44–55): For those questions that are followed by four choices, circle the number preceding the choice that, of those given, best completes the statement or answers the question. For all other questions in

44 State one way insect pests in an apple orchard can be controlled without using chemical pesticides. [1]

_______________________________________________________________

_______________________________________________________________

45 The tranquilizer thalidomide was once prescribed for pregnant women. When this drug was used between the third and sixth week after fertilization, serious deformities in the fetus occurred as the fetus developed. State why thalidomide would have a greater effect on development when used between weeks 3 and 6 than when used in late pregnancy. [1]

ISBN: 978-0983129811
$15.64

**Chemistry Regents Pocket Study Guide (Black Print)**
ISBN: 978-1460970874
$13.82

**Chemistry Regents Pocket Study Guide (Color Print)**
ISBN: 978-1460980620
$19.98

**Our Classroom Materials**

**Surviving Chemistry Review Book - 2012 Revision**
ISBN: 978-1478395409
$15.64

**Review Book Student Answer Sheet Booklet**
ISBN: 978-1466319523
$6.99

**Surviving Chemistry Guided Study Book - 2012 Revision**
ISBN: 978-1478257868
$17.99

**Surviving Chemistry Workbook**
ISBN: 978-1460942765
$17.99

*Free Answer Booklets (up to 4) with all class-size orders*
Cover colors: Each of our book titles is printed in three different cover colors. Same book title, same great contents, same price, three different cover colors to choose from. Visit our website e3chemistry.com to see all available cover colors for each title.

List Price: Visit our website for list price of each title
Catalog Price: Prices shown are discounted up to 25% from book list price.
Online Prices: Book prices on our website are lower (at a higher discount up to 35%) than our catalog prices.

We encourage schools and teachers to place orders on our website for bigger savings.
Book prices and discounts on other online sites like amazon.com and barnesandnoble.com may be different from our catalog and website prices.

Shipping: 10% shipping and handling charge on all class orders. Shipping discount is available for online orders.

Ordering Methods:
Online: e3chemistry.com
Fax/ Phone: (877) 224-0484
Mail: Send Purchase Order to above address

E3 Scholastic Publishing is a Print-On-Demand publisher. Books are printed only when an order is placed.
ALL pre-paid class orders are processed, printed and shipped within a few days. Class-size orders that are not pre-paid may experience significant delays in processing and shipment.

We encourage schools and teachers to prepay for class-size orders to ensure that books are delivered by the time they are needed.

Three convenient ways to Pre-Pay for your class-size orders:
1. Place your order directly from our website. Save big and pay Securely with a credit card through PayPal.
2. Call us to request an online invoice. Just Click and Pay Securely with a credit card through PayPal (this is our most convenient method)
3. Send a check for Order Total with your completed Purchase Order form. We also accept pre-payment of half the order total. We will invoice you the remaining amount upon confirmation of delivery.

Please call or email us with questions or comments at anytime.
