## Density

Concentration of matter in an object.
Classroom with 35 students $>$ density $>$ classroom with 2 students
Density of object $=$ ratio of mass to volume
Hence
desnity $=\frac{\text { mass }}{\text { volume }}$ or $\mathrm{d}=\underline{\mathrm{m}}$ or $\mathrm{d}=\mathrm{m} / \mathrm{v} \quad$ *see ESRT

## Number must have units!

Volume $=$ amount of space a substance occupies
Mass = amount of matter in an object
e.g.: mineral mass $=44$ grams and volume $=20 \mathrm{~cm}^{3}$, what is the density?
$\mathrm{d}=\mathrm{m} / \mathrm{v}$
$\mathrm{d}=\frac{44 \mathrm{~g}}{20 \mathrm{~cm}^{3}}$
$\mathrm{d}=2.2 \mathrm{~g} / \mathrm{cm}^{3}$
e.g.: object's mass $=100 \mathrm{~g}$ and volume $=200 \mathrm{~cm}^{3}$ calculate density.
e.g.: $\mathrm{m}=10 \mathrm{~g}$ and $\mathrm{v}=5 \mathrm{~cm}^{3}$
e.g.: density $=5 \mathrm{~g} / \mathrm{cm}^{3}$ and mass $=20 \mathrm{~g}$, what is the volume?
e.g.: $d=0.1 \mathrm{~g} / \mathrm{cm}^{3}$ and $\mathrm{v}=50 \mathrm{~cm}^{3}$ what is the mass?

Changes in temperature and pressure affect density.
